

**SIMS**  
RECYCLING  
SOLUTIONS

A **Global 100** Most Sustainable Corporation

Environmental responsibility is a top priority at Sims Recycling Solutions. Baghouses, HEPA filters, afterburners and other pollution control equipment ensure a safe work place for our 700+ employees and also assists in our efforts to protect the environment. We are watching out for you as well; our no export and no landfill policies for all electronics and electronic components protect your environmental liability.

Recycling plays an important role in manufacturing by creating raw materials that power the economy while helping to curb the use of limited natural resources. It remains part of our mission to aggressively protect our company, clients and communities from environmental and regulatory liabilities. High capacity shredders and purpose built separation equipment renders old technology into clean, recyclable materials, ensuring data security and brand protection along the way.
